

The Best Pet Doors by Design

Security Boss Manufacturing LLC was started in response to a void in the pet door market. There has always been a large selection of lower end, utility pet doors and very few higher end or high performance models. The few models that positioned themselves as better performing doors were simply priced higher, but not necessarily 'higher performance models'. It was into this void that the designers at Security Boss began to formulate the MaxSeal lines of doors. These models use the highest gauge of materials to make a unit that will not only provide a superior barrier to the outdoors, but provide optimal security.

Why Security Boss Makes the Very Best Pet Doors

Best Sealing Pet Door

The MaxSeal utilizes superior strength alnico magnets strategically positioned at critical points along the perimeter of each flap to maintain positive closure while allowing ease of use by any pet. A specially selected brush pile material was selected to line the perimeter of the flap in-between the magnets. This weather stripping forms and fills next to the flap edge so that there are no drafts or air leakage.

Best Insulating Design

The dual flap MaxSeal models emulate the very best in insulating design among pet door styles. The reason for this is due to the air space created by two individual flaps. The insulating effect is much greater than any insulated rigid flap regardless of the design or filler material; due to the transfer of cold through a solid material. This insulating effect is even greater in the wall models because the distance between the flaps is greater than in door models.

Unequaled Security

The MaxSeal model pet doors feature a unique slide in locking security panel. This panel utilizes several key materials to form a rigid, impact resistant, insulating barrier to the outside. This composite design allows for extreme temperatures outside while harnessing the warmth and comfort indoors. The superior insulating design also allows for unequalled strength. These carefully selected layers when together offer incredible impact resistance. Unlike most pet door locking covers that can be kicked in or easily broken, the MaxSeal Security Panel can withstand aggressiveness like no other. Finally, when you slide in our security panel, you get a similar feeling as if you were closing a heavy car door. ; The fit and permanence of the panel portrays a sense of permanence found in no other pet door product.

Our Doors are Made in the USA

American Ingenuity, Pride & Quality. We take great care and pride in what we do. The Security Boss family focuses each day on doing one thing at it's very best...making the best pet doors for residential and commercial customers.

We wanted to create a security locking panel for our pet door that we would feel comfortable going on vacation....and not worrying about who is entering our homes.

We feel that we accomplished this goal...and then some.

Philosophy of Quality

We attempt to design and manufacture all of our doors with the highest goals of quality.

This desire is also reflected in our support of our products. Our pledge is that if any Security Boss Pet Door customer has a problem or needs assistance with their product, we will make every attempt to rectify or correct the situation. After all, these are the same doors you will find in our homes.

Why Security Boss?

We Make the Best Pet Doors by Design

- We encourage you to compare our products with anyone
- Profit margins are maintained and protected
- We focus on providing you with the best pet doors

24 Hour Support

Ordering | Instructions | Documentation | Program Details | Product Information

- 24 hour Easy access ordering / fulfillment
- Discounts are automatically applied to your orders
- Units are made to order and shipped in nearly all circumstances with 2 business days, 2-4 for larger orders.
- Web Site designed to be used as a Point of Sale Tool for your Customers
- Deeply discounted UPS rates for ground as well as expedited options
- Quick access to installation instructions, technical specifications, Warranty etc.
- Accessory Items for product customization or long term maintenance
- Assigned Program Support Contact

Zero Inventory - Zero Hassles

- We fulfill the units you need as you need them
- No inventory required. No stocking or minimum ordering required.
- Return uninstalled units for full credit. You never have to absorb the cost of items you do not sell or install.

Showroom & Display Models*

- 50% off dealer pricing for display models
- Limit of one display per model per 12 months at discounted pricing
- MaxSeal Door Model
- MaxSeal Wall Model
- MaxSeal In-the-Glass Model

Increase your Business Potential

- Adds value and profit to the services you already provide
- Increases gross sales
- Increase customer traffic
- Year round market sales
- Assimilates easily into existing product offering
- Easily diversifies your income potential
- Minimal to zero capital investment required

Grow your Business without the Limitations of a Franchise

- No back end fees
- No installation revenue sharing (Some manufacturers require a sharing of your installation charges**).
- We are only interested in providing you the best pet door to augment your business

rev. 12-05-2011

MaxSeal Pet Door Features

Superior Warranty

Limited Lifetime warranty

Flaps:

- Low temperature PVC that are self extinguishing when exposed to flame
- UV Protected, prevents discoloration, brittleness and cracking
- Embedded nylon reinforcement for added flap strength
- Treated to prevent shrinking in extreme cold environments
- Stainless Steel Strikes riveted to flap that meet with the Alnico magnets in the pet door frame
- Easily are maintainable and replaced when needed by easy access thumbscrews

Magnets:

- 1 1/2 inch Steel Alnico Magnets align with steel strikes that are riveted to the flap to maintain positive closure
- Multiple magnets located along bottom and sides of flap
- Staggered placement in dual flap models create superior barrier from elements
- Optional High Wind Neo Magnets are available for extremely windy conditions

Pile Brush Weather Stripping

- Dense brush lines each flap perimeter to maintain a draft proof seal
- Replaceable, maintainable for the indefinite life of your door

Framing

- Features the strongest frame in the pet door industry
- 6063 extruded aluminum, .070 - .090 thick
- 10 Powder coated color finish options

Security Locking Panel

- 1/2 inch Insulated composite security panel
 - Composite design allows for optimal strength and impact resistance
 - Compression rivets provide for panel integrity and augment the proper closing action when locking into place
 - Choice of load direction; top, left or right
-

MaxSeal Frequently Asked Questions

How do I choose the right size door for my pet?

Please feel free to use the Selector below as a guide for the more common breeds. Remember that you want to select a pet door that will clear the tallest pet's shoulders by 1.5-2"...and have a low enough step over rise to allow for easy navigation given the pet's breed, age and mobility now and in the future.

Do I need a Single Or Dual Flap Model?

Most customers select the dual flap model if the pet door leads directly to the outside or to an unheated garage. The dual flap version will provide superior insulation, while the single flap is used for very temperate climates, going from one room to another within the house or if from porches and lanais to the outside. Remember, a pet door is an open access to the outdoors, you may be rest easier with the seal and barrier of a dual flap model.

What is the Rain Guard?

We include at no charge a Rain Guard to protect your pet door from direct rain exposure. This can be usefully if your home does not have an overhang at the location that the pet

door is installed. The MaxSeal does seal better than other pet doors but exercising some additional caution is always advantageous. The Rain Guard is not manufactured by Security Boss and is not a warrantee item, but is replaceable if needed.

Do Smaller pets, like cats, have any problems using larger pet door sizes?

We have numerous customers who have multiple pets. Even the largest, Behemoth, size can be used by the household cat. You will notice that while dogs go head first through the pet door flaps, cats will use their paws to gently push the corner of the flap.

Why the MaxSeal is the "Best Pet Door by Design"

There are several dual flap and insulated flap doors on the market. Most of these are lower quality economy doors that work well for utility purposes. There are a few that due to their higher cost, suggest a higher quality as well. Security Boss sees no virtue in equating a quality product with a high costing product. Quite the opposite is true; superior quality and performance at a fair price is the standard that Security Boss measures their product success. We don't simply profess that the MaxSeal is a better door, we show you why. We also seek to keep pricing as low as possible, but yet maintain the superior components used in production. So far we have been very successful not chasing competitors prices, or trying to be the most expensive. We also are very proud that all Security Boss products are Made in the USA.

How does the MaxSeal perform better than other insulating doors?

The MaxSeal Dual and Single flap doors utilize a special vinyl flap material. The flaps are made with a low temperature material and weatherized in the production process so that under sub zero temperatures, the flaps will not shrink like other vinyl flap doors. There is a nylon reinforcement cord that is embedded in the vinyl in order to provide added strength and durability to the flexible flap. Our flaps are then UV treated to give you protection in very hot and sunny conditions to prevent yellowing and degradation. The MaxSeal flaps remain flexible in all conditions and are the friendliest for pets to use. Flexible vinyl flaps are a tested, proven medium that bears the best results compared to other newer designed pet doors.

Security Boss also uses a higher grade of weather brush that lines the perimeter of the flap to eliminate any air leakage in both hot and cold environments. The Flaps also have stronger, more expensive magnets than other pet doors that ensure a positive sealing flap. A larger door will have more magnetic connection points than a smaller door. Another unique characteristic of the MaxSeal is the Insulated Security Panel. Not only is it the strongest locking cover, able to withstand most any violent force, but it is an added insulating layer. When locked off, you will wonder if a pet door is installed in your home at all! All these features are housed in the strongest frame used in the pet door industry.

Will the MaxSeal doors keep out bugs, rodents and other animals?

Most nuisance animals are attracted to food sources or temperature differences. Most customers find that the MaxSeal doors seal so well that they never have problems with other animals. A Pet door becomes an invitation when the door itself is not sealing perfectly. In these instances odors from food and cooler or warmer temperatures lure other animals into the house. Electronic doors are recommended usually for customers who have problems with animals who have learned already by pushing through a pet door. The activity of pets also keeps away other animals, especially dog activity. MaxSeal's higher quality flaps along with the denser weather brush and the stronger magnetic contact points seals the pet opening tight, so there is no indication of a pet door.

How do the MaxSeal doors lock?

All MaxSeals come with an impact resistant, 1/2" thick insulated security panel that dead-bolts into place for optimum security. We have tried to destroy the MaxSeal security panel under many conditions; using crow-bars, baseball bats, as well as weight stress testing. These panels hold up as well as the natural wall of your home. It would be less time consuming and less effort to break a window in the home than get through a locked MaxSeal.

Note: *Other doors incorrectly advertise panels made with "Bullet proof" material. These incorrectly labeled doors utilize GE Lexan or some other polycarbonate plastic material. Ge Lexan is a component of bullet proof glass, but only when constructed in very thick applications. Bullet proof products run thousands of dollars for a single sheet of material and are not practical for pet doors.*
